Plant Height: 12 inches

Flower Height: 18 inches

Spread: 12 inches

Sunlight: ○ ◐

Hardiness Zone: 4

Description:

This fine grass forms mounds of rich sea-green foliage massed together; subtle fall color in tones of pink and burgundy; will tend to have better color when regularly watered; perfect for edging or the rock garden

Ornamental Features

Rainbow Tufted Fescue is primarily valued in the garden for its interestingly mounded form. It features delicate panicles of violet catkins rising above the foliage in mid summer. Its attractive grassy leaves are bluish-green in color. As an added bonus, the foliage turns a gorgeous burgundy in the fall.

Landscape Attributes

Rainbow Tufted Fescue is an herbaceous evergreen perennial grass with a mounded form. It brings an extremely fine and delicate texture to the garden composition and should be used to full effect.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It has no significant negative characteristics.

Rainbow Tufted Fescue is recommended for the following landscape applications;

- Rock/Alpine Gardens
- Border Edging
- General Garden Use
- Naturalizing And Woodland Gardens
- Container Planting

Planting & Growing

Rainbow Tufted Fescue will grow to be about 12 inches tall at maturity extending to 18 inches tall with the flowers, with a spread of 12 inches. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 8 years. As an evegreen perennial, this plant will typically keep its form and foliage year-round.

This plant does best in full sun to partial shade. It prefers to grow in average to dry locations, and dislikes excessive moisture. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selection of a native North American species. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Rainbow Tufted Fescue is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a mass of flowers and foliage against which the thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
