Pink Flowered Chinese Indigo

Indigofera amblyantha

Height: 6 feet

Spread: 6 feet

Sunlight: ○

Hardiness Zone: 6

Other Names: Pinkflower, Indigo, Indigofera

Description:

Graceful, upright racemes of pink pea-shaped flowers make a showy display in summer; compound foliage adds a nice texture to the landscape; will die back to the ground in colder climates, but will re-sprout from the roots

Landscape Attributes

Pink Flowered Chinese Indigo is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting bees and butterflies to your yard. It has no significant negative characteristics.

Pink Flowered Chinese Indigo is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Pink Flowered Chinese Indigo will grow to be about 6 feet tall at maturity, with a spread of 6 feet. It tends to be a little leggy, with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 40 years or more.

This shrub should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. This plant should not require much in the way of fertilizing once established, although it may appreciate a shot of general-purpose fertilizer from time to time early in the growing season. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This species is not originally from North America.
